Appl. No. 10/718,297

Response dated 09/27/2007

Reply to Office Action of 06/27/2007

IN THE CLAIMS:

This listing of claims will replace all prior versions, and listing of claims, in the Application.

Listing of claims:

 (Currently amended) A method of executing server-side code in a client server environment comprising:

identifying an input object on a client system, the input object identifying code for executing on a server;

processing [[an]] the input object identifying code for executing on a server, said processing using a view list of at least one input object element, each input object element processing a type of code identified by the input object to identify the code for executing on a server output a deployable object;

generating, in response to identifying the code for executing on a server, code for accessing the code for executing on a server;

processing the generated code deployable object using a server-list of at least one server element to determine a server for executing the code for executing on a server, each code for executing on a server being able server element enabling the deployable object to execute on a particular server and outputting a launchable object; and

enabling the determined server to access the code for executing on a server:

Appl. No. 10/718,297 Response dated 09/27/2007

Reply to Office Action of 06/27/2007

identifying, based on the accessed code for executing on a server, a client application for allowing the determined server to interact with the client

system during processing of the code for executing on a server; and

processing the code for executing on a server on the determined server launchable object using a launcher list of at least one client element to

determine a client for launching the code on the particular server.

2. (Currently amended) The method of claim 1 wherein the step of

processing the input object to identify the code for executing on a server

includes the step of using a view list of at least one input element for processing a type of code identified by the input object, the step of

processing the generated code includes the step of using a server list of at

least one server element for determining the server, and the step of identifying the client application includes the step of using a launcher list of

at least one client element for launching the client application determined

in response to the launchable object and executing the code on the

particular server.

3. (Currently amended) The method of claim [[1]] 2 wherein at least one of

the view list, server list and launcher list is extensible to accommodate

additional respective elements.

4. (Currently amended) The method of claim [[1]] 2 comprising maintaining at

least one of the view list, server list and launcher list.

5. (Original) The method of claim 4 wherein the step of maintaining

comprises extending any of the view list, server list and launcher list.

CA920020055US1

Page 8 of 23

(Currently amended) The method of claim 1 wherein the step of processing the input object comprises:

analysing analyzing the input object to determine an input object element for processing the input object; and

processing the input object using the determined input object element.

- (Original) The method of claim 6 including processing user input to determine the input object element.
- (Currently amended) The method of claim 1 wherein the step of processing the generated code deployable object comprises:

analysing analyzing the deployable object to determine a server element for enabling a processing the deployable object; and

processing the deployable object using the determined server element.

- (Original) The method of claim 8 including processing user input to determine the server element.
- (Currently amended) The method of claim 1 wherein the step of identifying the client application processing the launchable object comprises:

analysing analyzing a the launchable object to determine a client element for processing the launchable object; and

processing the launchable object using the determined client element.

Response dated 09/27/2007

Reply to Office Action of 06/27/2007

11. (Original) The method of claim 10 including processing user input to

determine the server element.

12. (Original) An extensible mechanism for executing server side code in a

client server environment comprising:

a view mechanism for processing an input object identifying code for

executing on a server and outputting a deployable object:

a server mechanism for processing the deployable object to determine a

particular server for executing the code and to enable the deployable

object to execute on the particular server, said second mechanism

outputting a launchable object; and

a launcher mechanism for processing the launchable object to determine

a client for launching the code on the particular server.

13. (Original) The extensible mechanism of claim 12 wherein said view

mechanism comprises a view list of at least one input object element,

each input object element processing a type of code identified by the input

object for outputting the deployable object.

14. (Original) The extensible mechanism of claim 13 wherein said view list is

extensible to accommodate additional respective elements.

15. (Original) The extensible mechanism of claim 12 wherein said server

mechanism comprises a server list of at least one server element, each

server element enabling the deployable object to execute on a particular

server and processing the deployable object for outputting a launchable

16. (Original) The extensible mechanism of claim 15 wherein said server list is

extensible to accommodate additional respective elements.

17. (Original) The extensible mechanism of claim 12 wherein said launcher

mechanism comprises a launcher list of at least one client element, each

client element enabling the launchable object to execute on a particular client for launching the code on the particular server.

18. (Original) The extensible mechanism of claim 17 wherein said launcher list

is extensible to accommodate additional respective elements.

19. (Original) The extensible mechanism of claim 12 wherein said extensible

mechanism is adapted to launch the client determined in response to the

launchable object for executing the code on the particular server.

20. (Original) The extensible mechanism of claim 12 wherein at least one of

said view mechanism, server mechanism, and launcher mechanism is extensible whereby said view mechanism is extensible to accommodate a

plurality of code types, said server mechanism is extensible to

accommodate a plurality of servers and said launcher mechanism is

extensible to accommodate a plurality of clients.

21. (Original) The extensible mechanism of claim 12 wherein said view

mechanism is adapted to analyze the input object to determine an input

object element for processing the input object and process the input object

using the determined input object element.

Reply to Office Action of 06/27/2007

22. (Original) The extensible mechanism of claim 21 wherein said view

mechanism is further adapted for processing user input to determine the

input object element.

23. (Original) The extensible mechanism of claim 12 wherein said server

mechanism is adapted to analyze the deployable object to determine a

server element for processing the deployable object; and process the

deployable object using the determined server element.

24. (Original) The extensible mechanism of claim 23 wherein said server

mechanism is further adapted for processing user input to determine the

server element.

25. (Original) The extensible mechanism of claim 21 wherein said launcher

mechanism is adapted to analyze the launchable object to determine a

client element for processing the launchable object; and process the

launchable object using the determined client element.

26. (Original) The extensible mechanism of claim 25 wherein said launcher

mechanism is further adapted for processing user input to determine the

server element.

27. (Original) The extensible mechanism of claim 12 wherein said extensible

mechanism is adapted to be integrated into an integrated development

environment.

28. (Previously presented) A computer program product embodied in a

computer readable medium for instructing a computer system to perform a

method in accordance with claim 1.

CA920020055US1

Page 12 of 23

to:

29. (Currently amended) A computer readable media storing data and instructions readable by a computer system, said computer system executing an integrated development environment (IDE) for generating code for executing in a client server environment, said data and instructions defining an extensible mechanism for executing said code on a server that, when deployed on said computer system, adapts said IDE

process an input object identifying code for executing on a server, said processing using a view list of at least one input object element, each input object element processing a type of code identified by the input object to output a deployable object:

process the deployable object using a server list of at least one server element to determine a server for executing the code, each server element enabling the deployable object to execute on a particular server and outoutting a launchable object; and

process the launchable object using a launcher list of at least one client element to determine a client for launching the code on the particular server.

- (Original) The computer readable media of claim 29 wherein said IDE is further adapted by said data and instructions for modifying at least one of the view list, server list and launcher list.
- 31. (Original) The computer readable media of claim 29 wherein said IDE is further adapted by said data and instructions to launch the client determined in response to the launchable object to execute the code on the particular server.

Appl. No. 10/718,297 Response dated 09/27/2007

Reply to Office Action of 06/27/2007

32. (Original) A method of maintaining an extensible mechanism for executing

server side code in a client server environment comprising:

maintaining at least one of:

a view list of at least one input object element, each input object

element processing a type of code identified by the input object to

output a deployable object;

a server list of at least one server element to determine a server for

executing the code, each server element enabling the deployable

object to execute on a particular server and outputting a launchable

object; and

a launcher list of at least one client element to determine a client for

launching the code on the particular server.

33. (Currently amended) The method of claim 32 wherein the step of

maintaining comprises at least one of:

generating a respective element for;

adding a respective element to:

configuring a respective element of; and

deleting a respective element from at least one of the view list, server list

and launcher list.
